

DO YOU LIVE NEAR
ONE OF THESE?...
IS 5 G AN 'INVISIBLE
DANGER'?...
WERE YOU CONSULTED?...

# **DID YOU KNOW**

These emit high levels of radiation

with 'boosters' to be added to lamposts next.

www.es-uk.info

Harmful to children

www.emfacts.com

Harmful to the environment, wildlife & plantlife.

www.microwavenews.com

Towers not allowed within 3000m (Almost 2 miles!) of children in most European Countries.

# **SYMPTOMS INCLUDE**

- Headaches
  - Tiredness
- Muscle Aches and Pains
  - Skin Rashes
    - Tinnitus
- And even long term cancers www.academic.oup.com/aje/article/169/2/167/95445

**SOUND FAMILIAR?** 

WHAT CAN I DO?...

Contact your area MP and Councillors.

Speak to your neighbours... share concerns.

Do your own research... not just Google!

**GET THEM MOVED!** 

### **ELECTROSENSITIVITY**

Electrosensitivity (ES) is a physical intolerance of electromagnetic (EM) fields, described since 1932. At first, electrical, radio and radar workers were affected, but it has now spread into the general population as mobile phones, phone masts, WiFi and smart meters have become common.

Mobile phones
WiFi
Mobile phone masts
Computers
Cordless phones
Smart meters
Low energy lighting
Power lines
Substations
Radar

#### **SYMPTOMS**

Tinnitus
Sleep disruption
Concentration problems
Dizziness
Lethargy
Muscle pains
Some cancers
Skin tingling
Earaches
Headaches
Fatigue
Blood pressure effects
Miscarriages
Skin lesions

#### WHO?

Anyone can develop ES, including children. Surveys show that 1.2% of the general population are severely affected, 3-8% moderately sensitive, 30% slightly sensitive and 100% are subconsciously sensitive.

#### **PROGRESSION**

ES is often progressive.
The sufferer may become sensitive to a wider range of frequencies, or their symptoms may become more severe, and include becoming sensitive to chemicals or other allegens. Life can become very restricted; some sufferers cannot use a computer or telephone, watch TV or go to the shops.

## **CAN MOBILE PHONES, MASTS AND WIFI CAUSE CANCER?**

Yes. The World Health Organisation's International Agency for Research on Cancer classifies powerline and radio frequency - like mobile phones, phone masts, WiFi and smart meters - as class 2B (possible) cancer agents. Leading scientists say they should now be class 2A (probable) or class 1 (certain). Many studies also show increased risk of neurological diseases, cardiovascular effects, oxidative stress damage to DNA, in addition to ES.

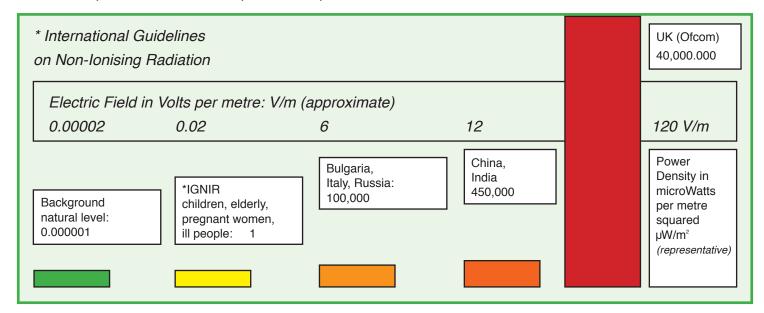

## **OTHER COUNTRIES**

The Council of Europe recommends 'green' zones free from man-made EM radiation and a limit of 0.2 V/m. Canada, Sweden and the USA recognise ES as a functional disability. In Sweden, people with ES can get grants to shield their homes. There are mobile-phone-free zones on public transport.

## **UK GOVERNMENT AND ES**

The UK Government still follows an invalidated theory on EM exposure, which protects people against only short-term heating effects, not long-term effects like cancers, ES and neurological harm. It confuses real ES with Electophobia.

Please note: The towers near you are emitting much higher levels of radiation than the 0.200 m/m<sup>2</sup> recommended as 'safe' levels for humans.
